exercises

2.14, 2.34, 2.36, 2.50, 2.56, 2.60, 2.78, 2.82, 2.95, 2.100

2.14

if $S = 0, 1, 2, 3, 4, 5, 6, 7, 8, 9$ and $A = 0, 2, 4, 6, 8, B = 1, 3, 5, 7, 9, C = 2, 3, 4, 5$, and $D = 1, 6, 7$, list the elements of the sets corresponding to the following events:

- $A \cup B = 0, 1, 2, 3, 4, 5, 6, 7, 8, 9$
- $A \cap B = 0, 2, 4, 6, 8$
- $C' = 0, 1, 6, 7, 8, 9$
- $(C' \cap D) \cup B = 1, 6, 7, 3, 5, 9$
- $(S \cap C)' = 0, 1, 6, 7, 8, 9$
- $A \cap C' \cap D' = 2, 4$

2.34

a. how many distinct permutations can be made from the letters of the word COLUMNS?

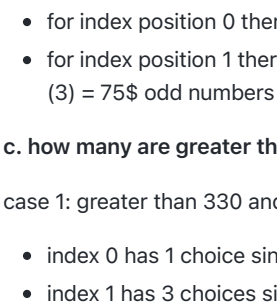

$C = n_1, O = n_2, L = n_3, M = n_4, U = n_5, S = n_6$ where there are total $n = 7$ elements and no letter can appear no more than just once therefore according to the fundamental counting principle there are $n! = 7! = 5040$ permutations

b. how many of these permutations start with the letter M?

the required number of permutations where $M = n_4$ is fixed at the first index position leaves there to be $n - 1 = 6$ elements to be permuted therefore there are $n! = 6! = 720$ permutations.

2.36

a. how many three-digit numbers can be formed from the digits 0, 1, 2, 3, 4, 5, 6 if each digit can be used only once?

there are 7 unchosen digits to choose from in total.

- for index position 0 there are 6 digits to choose from other than 0 (say we choose 1)
- for index position 1 there are 6 digits to choose from other than 1 (say we choose 0)
- for index position 2 there are 5 digits to choose from other than 0 and 1 (say we choose 2) therefore there are $5(6)(5) = 1805$ three-digit numbers that can be formed from the digits 0, 1, 2, 3, 4, 5, 6 if each digit can be used only once.

b. how many of these are odd numbers?

there are 7 unchosen digits to choose from in total

- for index position 2 there are 3 digits to choose from since the only odd digits are 1, 3, 5 (say we choose 5)
- for index position 1 there are 5 digits to choose from since 0 can't be the first digit and 5 is already chosen (say we choose 1)
- for index position 0 there are 5 digits to choose from since 1 and 5 are already chosen (say we choose 0) therefore there are $5(5)(5) = 755$ odd numbers that can be formed from the digits 0, 1, 2, 3, 4, 5, 6 if each digit can be used only once.

c. how many are greater than 330?

case 1: greater than 330 and less than 400 (precisely $340 \leq x \leq 365$)

- index 0 has 1 choice since we are only considering 3 (say we choose 3)
- index 1 has 3 choices since we are only considering 4, 5, 6 (say we choose 4)
- index 2 has 5 choices since we exclude 3, 4 (say we choose 0) so, there are $5(1)(3)(5) = 155$ for case 1

case 2: greater than 400 (precisely $401 \leq x \leq 654$)

- index 0 has 3 choices since we are only considering greater than 3, so 4, 5, 6 (say we choose 4)
- index 1 has 6 choices since we are excluding 4 (say we choose 0)
- index 2 has 5 choices since we exclude 4, 0 (say we choose 1) so, there are $3(6)(5) = 90$ for case 2

therefore, case 1 + case 2 = $5(1)(3)(5) + (3)(6)(5) = 1055$ numbers greater than 330

$$(1)(3)(5) + (3)(6)(5) = 1055$$

2.37

in how many ways can 4 boys and 5 girls sit in a row if the boys and girls must alternate?

according to the fundamental counting principle if an operation can be performed in n_1 ways, and if for each of these a second operation can be performed in n_2 ways, then these two operations can be performed together in $n_1 * n_2$ ways.

$S = b, b, b, b, g, g, g, g, g$

- the first operation which consists of the number of permutations of 5 girls is $n_1 = 5! = 120$ different ways
- the second operation which consists of the number of permutations of 4 boys is $n_2 = 4! = 24$ different ways
- therefore $n_1 * n_2 = 120 * 24 = 2880$ ways in which 4 boys and 5 girls can sit in a row with the given condition that boys and girl must alternate.

2.50

assuming that all elements of S in exercise 2.8 on page 42 are equally likely to occur, find

a. the probability of event A

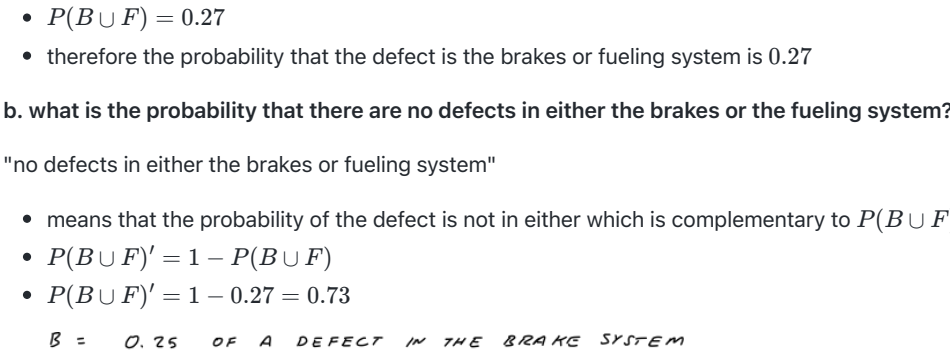

$$P(A) = 10(1/36) = 10/36 = 5/18$$

b. the probability of event C

$$P(C) = 12(1/36) = 12/36 = 1/3$$

c. the probability of event $A \cap C$

$$P(A \cap C) = 7(1/36) = 7/36 = 7/108$$

2.56

an automobile manufacturer is concerned about a possible recall of its best-selling four-door sedan. if there were a recall, there is a probability of 0.25 of a defect in the brake system, 0.18 of a defect in the transmission, 0.17 of a defect in the fuel system, and 0.40 of a defect in some other area.

a. what is the probability that the defect is the brakes or the fueling system if the probability of defects in both systems simultaneously is 0.15?

"both systems simultaneously"

- means that the probability of the defect being in both is 0.15
- $P(B \cap F) = 0.15$

"what is the probability that the defect is the brakes or fueling system?"

- since we were given $P(B \cap F) = 0.15$
- $P(B \cup F) = P(B) + P(F) - P(B \cap F)$
- $P(B \cup F) = 0.25 + 0.17 - 0.15 = 0.27$
- therefore the probability that the defect is the brakes or fueling system is 0.27

b. what is the probability that there are no defects in either the brakes or the fueling system?

"no defects in either the brakes or fueling system"

- means that the probability of the defect is not in either which is complementary to $P(B \cup F)$
- $P(B \cup F)' = 1 - P(B \cup F)$
- $P(B \cup F)' = 1 - 0.27 = 0.73$

$B = 0.25$ OF A DEFECT IN THE BRAKE SYSTEM

$T = 0.18$ OF A DEFECT IN TRANSMISSION

$F = 0.17$ OF DEFECT IN FUEL SYSTEM

$O = 0.40$ OF DEFECT IN SOME OTHER AREA

NO DEFECTS IN EITHER BRAKES OR FUELING SYSTEM

$$P(B \cup F) = 0.27$$

$$P(B \cup F)' = 1 - P(B \cup F)$$

$$P(B \cup F)' = 1 - 0.27 = 0.73$$

EXCLUDING B OR F

TOTAL PROBABILITY

$$P(B \cup F)' = 1 - P(B \cup F) = 1 - 0.27 = 0.73$$

2.60

if 3 books are picked at random from a shelf containing 5 novels, 3 books of poems, and a dictionary, what is the probability that the number of combinations (ways of choosing, regardless of order and without replacement) of $N = 9$ distinct objects taken $R = 3$ at a time is found in theorem 2.8 of combinatorics

$S = n_1, n_2, n_3, n_4, n_5, p_1, p_2, p_3, d$

$$\binom{N}{R} = \frac{N!}{R!(N-R)!}$$

$$\binom{9}{3} = \frac{9!}{3!(9-3)!} = \frac{9!}{3!(6)!} = \frac{9 \cdot 8 \cdot 7}{3 \cdot 2 \cdot 1} = \frac{504}{6} = 84$$

- where $N = 9$ is the total number of objects
- and $R = 3$ is the number of objects to be chosen

a. the dictionary is selected?

- number of ways to select 1 dictionary and 2 other books is,
- $\binom{1}{1} \binom{8}{2} = \frac{1!}{1!(1-1)!} \frac{8!}{2!(8-2)!} = \frac{1!}{1!} \frac{8!}{2!6!} = 28$
- therefore, the probability of selecting the dictionary is $28/84 = 7/21 = 1/3$

b. 2 novels and 1 book of poems are selected?

- number of ways to select 2 novels and 1 poem is,
- $\binom{5}{2} \binom{3}{1} = \frac{5!}{2!(5-2)!} \frac{3!}{1!(3-1)!} = \frac{5!}{2!3!} \frac{3!}{1!2!} = \frac{(5 \cdot 4 \cdot 3 \cdot 2 \cdot 1)}{(2 \cdot 1 \cdot 3 \cdot 2 \cdot 1)} \frac{(3 \cdot 2 \cdot 1)}{(1 \cdot 2 \cdot 1)} = 30$
- therefore the probability of selecting 2 novels and 1 poem is $30/84 = 5/14$

3 BOOKS ARE CHOSEN AT RANDOM

FROM A 9 BOOK IN TOTAL SET

$$S = \{n_1, n_2, n_3, n_4, n_5, p_1, p_2, p_3, d\}$$

THE NUMBER OF COMBINATIONS (WAYS OF CHOOSING)

REGARDLESS OF ORDER & WITHOUT REPLACEMENT

OF N DISTINCT OBJECTS TAKEN R AT A TIME

TOTAL OBJECTS TO CHOOSE FROM

R TOTAL OBJECTS CHOSEN

$$\binom{N}{R} = \frac{N!}{R!(N-R)!}$$

$$\binom{9}{3} = \frac{9!}{3!(9-3)!} = \frac{9!}{3!6!} = \frac{9 \cdot 8 \cdot 7}{3 \cdot 2 \cdot 1} = \frac{362880}{6 \cdot 720} = \frac{362880}{4320} = 84 \text{ WAYS}$$

IF A DICTIONARY IS SELECTED & 2 OTHER BOOKS IS

$$\frac{\binom{8}{2} + \binom{1}{1}}{\binom{9}{3}} = \frac{\binom{8}{2} + \binom{1}{1}}{\binom{9}{3}} = \frac{28 + 1}{84} = \frac{29}{84}$$

IF 2 NOVELS & 1 POEM

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$

$$\frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{\binom{5}{2} + \binom{3}{1}}{\binom{9}{3}} = \frac{10 + 3}{84} = \frac{13}{14}$$
