

1.5. **covariance** the covariance of two random variables  $X$  and  $Y$  with means/expected valyes of  $\mu_X$  and  $\mu_Y$  is  $\sigma_{XY} = E(XY) - \mu_X\mu_Y$

4.13 **example** there are a number of blue refills  $X$  and the number of red refills  $Y$ . two refills for a ballpoint pen are selected at random from a certain box, and the following is the joint probability distribution

f(x, y)	x = 1	x = 1	x = 2	h(y)
y = 0	3/28	9/28	3/28	5/28
y = 1	3/14	3/14	0	3/7
y = 2	1/28	0	0	1/28
g(x)	5/14	14/28	3/28	1

find the covariance of  $X$  and  $Y$  the expected value  $E(XY)$  is = 3/14

$$E(XY) = \sum_{x=0}^2 \sum_{y=0}^2 xyf(x,y) = (0)(0)f(0,0) = (0)(1)f(0,1) + (1)(0)f(1,0) + (1)(1)f(1,1) + (2)(0)f(2,0)$$

$$E(XY) = f(1,1) = 3/14$$

now the covariance is therefore,

$$\mu_X = \sum_{x=0}^2 xg(x) = (0)(5/14) + (1)(15/28) + (2)(3/28) = 3/4$$

$$\mu_Y = \sum_{y=0}^2 yh(y) = (0)(15/28) + (1)(3/7) + (2)(1/28) = 1/2$$

$$\sigma_{XY} = E(XY) - \mu_X\mu_Y = (3/14) - (3/4)(1/2) = -9/56$$

4.14 **example** the fraction  $X$  of male runners anfd the fraction  $Y$  of feamle runners who compete in marathon races are described by the joint density function, find the covariance of  $X$  and  $Y$

$$f(x,y) = \begin{cases} 8xy, & 0 \leq y \leq x \leq 1 \\ 0, & \text{elsewhere} \end{cases}$$

first we compute the marginal density function, they are

$$g(x) = \begin{cases} 4x^3, & 0 \leq x \leq 1, \\ 0, & \text{elsewhere,} \end{cases}$$

$$h(x) = \begin{cases} 4y(1-y^2), & 0 \leq x \leq 1, \\ 0, & \text{elsewhere,} \end{cases}$$

then we compute the joint density function

$$\mu_X = E(X) = \int_0^1 \int_y 18x^2y^2 dx dy = 4/9$$

$$\sigma_{XY} = E(XY) - \mu_X\mu_Y = 4/9 - (4/5)(8/15) = 4/225$$

1.6. **correlation coefficient** of  $X$  and  $Y$ , let  $X$  and  $Y$  be random variables with covariance  $\sigma_{XY}$  and standard deviation  $\sigma_X$  and  $\sigma_Y$ , the correlation coefficient of  $X$  and  $Y$

$$\rho_{XY} = \frac{\sigma_{XY}}{\sigma_X\sigma_Y}$$

4.15. **example** find the correlation coefficient between  $X$  and  $Y$  in example 4.13

$$E(X^2) = (0^2)(5/14) + (1^2)(15/28) + (2^2)(3/28) = 27/28$$

$$E(X^2) = (0^2)(15/28) + (1^2)(3/7) + (2^2)(1/28) = 4/7$$

$$\sigma_X^2 = 27/28 - (3/4)^2 = 45/112$$

$$\sigma_Y^2 = 4/7 - (1/2)^2 = 9/28$$

therefore the correlation coefficient between  $X$  and  $Y$  are

$$\rho_{XY} = \frac{\sigma_{XY}}{\sigma_X\sigma_Y} = \frac{-9/56}{\sqrt{(45/112)(9/28)}} = -\frac{1}{\sqrt{5}}$$

4.16 **example** find the correlation coefficient of  $X$  and  $Y$  in example 4.14, because

$$E(X^2) = \int_0^1 4x^5 dx = \frac{2}{3}$$

$$E(Y^2) = \int_0^1 4y^3(1-y^2)dy = 1 - \frac{2}{3} = \frac{1}{3}$$

$$\rho_{XY} = \frac{2/225}{\sqrt{(2/75)(11/225)}} = \frac{4}{\sqrt{66}}$$

4.34. **exercise** let  $X$  be a random variable with the following probability distribution

X	-2	3	5
f(x)	0.3	0.2	0.5

find the standard deviation of  $X$

$$\mu = (-2)(f(-2)) + (3)(f(3)) + (5)(f(5))$$

$$\mu = (-2)(0.3) + (3)(0.2) + (5)(0.5)$$

$$E(X^2) = (0)^2(0.4) + (1)^2(0.3) + (2)^2(0.2) + (3)^2(0.1) = 2.0$$

$$\sigma_2 = E(X^2) - \mu^2 = 9.25 \text{ and } \sigma = 3.041$$

(3.62) AN INSURANCE COMPANY OFFERS ITS POLICYHOLDERS A NUMBER OF DIFFERENT PREMIUM PAYMENT OPTIONS. FOR A RANDOMLY SELECTED POLICYHOLDER, LET  $X$  BE THE NUMBER OF MONTHS BETWEEN SUCCESSIVE PAYMENTS, THE CUMULATIVE DISTRIBUTION FUNCTION OF  $X$  IS
